

Sustainable Street Lighting

Valled products rely on cutting-edge technology when it comes to solar energy, lamps, energy storage and support structures for installation processes, with inviolable and anti-theft mechanisms developed by the company.

With experience in building and installing their own products, Valled is capable of developing mechanisms and technology that allow a more efficient and faster installation of light poles, anywhere in the world. Currently in a patenting phase, our equipment, created and developed specifically for our products, allow the placement of plug&play poles in any ground and condition, quickly and efficiently.

Discover our product range.

Driven by the market's need for sustainable electric solutions with solar resources, Valled's founders, with over 20 years of experience in the electrical and industrial assemblage field, united all their knowledge and experience to build the company.

Certified by the ISO 9001 international standard, Valled adopts values of work ethic, discipline and competence in order to foster development.

MADE IN PORTUGAL

EMPRESA CERTIFICADA

certificação acreditada IPAC

MAMUTE

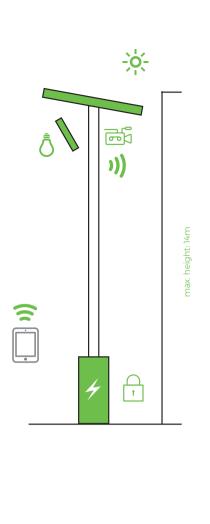

Sustainable lighting pole with different height settings and lamps available. It is composed of a shaft, lamp, photovoltaic panels, batteries, charge regulator and lighting control system. It has an autonomy of 3 to 5 days with a 12-hour daily use.

The dimensions of the panels, batteries and charge regulator are calculated according to the installation site, type of use and operating conditions (temperature and humidity).

СНІР	Upon request
CRI (Colour Rendering Index)	> 70%
POWER	100 to 300W
INPUT VOLTAGE	24V DC
OPERATING TEMPERATURE	-20°C + 60°C
PROTECTION LEVEL	IP 65
LIGHT LOSS	Less than 1% for every 3000 hours of continuous operation
LENS BEAM ANGLE	Upon request
MATERIAL	Galvanized steel
DIMENSIONS (mm)	Upon request
WEIGHT (Kg)	Upon request
DURATION	35000 a 50000h

REF.	HEIGHT	POWER	COLOR	LUMINOUS FLUX (LF)	COLOR TEMPERATURE

<u>GIRAFA</u>

Sustainable lighting pole with different height settings and lamps available.

It is composed of a shaft, lamp, photovoltaic panels, batteries, charge regulator and lighting control system.

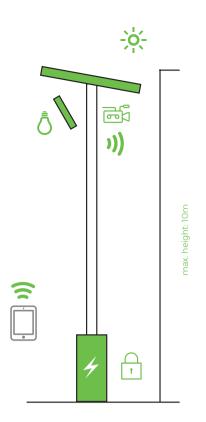

It has an autonomy of 3 to 5 days with a 12-hour daily use.

The dimensions of the panels, batteries and charge regulator are calculated according to the installation site, type of use and operating conditions (temperature and humidity).

<u>GAZELA</u>

Sustainable lighting pole with different height settings and lamps available.

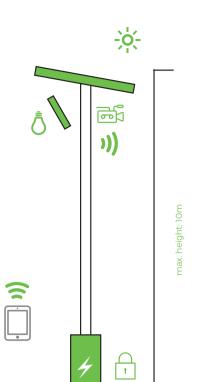

It is composed of a shaft, lamp, photovoltaic panels, batteries, charge regulator and lighting control system. It has an autonomy of 2 to 3 days with a 10-hour daily use.

The dimensions of the panels, batteries and charge regulator are calculated according to the installation site, type of use and operating conditions (temperature and humidity).
